

**FOR IMMEDIATE RELEASE**

## **Array Networks Launches First Comprehensive Remote Access Solution Optimized for SMBs**

*SPX800 offers a full range of SSL VPN and remote desktop access functionality without making sacrifices in time, effort, budget, or security*

**MILPITAS, CA – August 5, 2009 – [Array Networks Inc.](#)**, a global leader in secure application delivery, today announced the launch of the Array SPX800 Universal Access Controller (UAC), the first comprehensive remote access solution for small and medium businesses (SMBs). With the SPX800 appliance, SMBs and all employees, road warrior and office worker alike, can now benefit from a full range of SSL VPN and remote desktop access functionality without making sacrifices in time, effort, budget, or security.

The SPX800 appliance is the first in its class to enable any user, road warrior or office worker, to securely connect to internal resources from remote locations, in an easy-to-deploy appliance. For road warriors, the SPX 800 delivers SSL VPN access to the network and all applications from any PC from any location. For users that typically work in an office, the SPX800 provides remote access to the worker's desktop with complete access to his applications. This enables the SMB to have a single solution for remote access and reduces the number of laptop computers that these businesses need to purchase.

“Remote access for SMBs has been an afterthought for enterprise-class SSL VPN vendors.” said Michael Zhao, president and CEO of Array Networks. “Accordingly, SMBs have had to settle for limited functionality or poor quality of experience. With the SPX800, SMBs now have a truly high-value, optimized remote access solution that serves all their needs in a single, affordable appliance.”

Optimized to deliver the best end-user experience, the SPX800 delivers the same capabilities as Array's enterprise SSL VPN appliances to SMBs. These businesses can now quickly, easily, and cost-effectively provide employees and partners with remote access to internal applications, desktop PCs and servers, as well as virtual infrastructure.

As the only hardware-accelerated entry-level SSL VPN appliance with auto power management, the SPX800 offers the most intuitive, consistent, high quality end-user experience. Typical setup time takes less than 30 minutes. The SPX800 features Array Pilot, a streamlined administrative user interface with wizards and device configuration workflows that make installation simple for any IT administrator, eliminating the need for training or additional technical support.

The Array SPX800 UAC is available immediately with two options: 25 concurrent users and 50 concurrent users. It includes a full set of SSL VPN features as well as

DesktopDirect™, the industry's only comprehensive, premise-based, enterprise-class remote desktop control solution.
